Opening plenary

BGIN Block 15 · Georgetown University Capitol Campus, 111 Massachusetts Avenue NW, Washington, D.C.

Date	15 October 2026
Room	Room A (2424)
Published time	09:00–09:20
Workstream	Programme framing
Status	Draft for working-group review. Source: closed captions.
Rule	Chatham House Rule. Information may be used without revealing the identity or affiliation of speakers or other participants, directly or indirectly.

This is a session record, not a transcript. Substantive discussion is retained with uncertainty and disagreement made explicit. Reported claims are not verified findings. Candidate agreements require working-group confirmation before use as decisions. Actions omit personal owners and identifying roles.

Agreements

The following sentences stand on their own. These are candidate agreements and reported points of convergence for working-group review. Inclusion does not establish consensus, verify a technical claim, or record formal adoption. The working group must confirm each decision before it is cited as such. Claims that were only discussed, including figures and alternatives that were not adopted, remain in full under Discussion.

The meeting record will be anonymized.

Recordings are for the report and are not an AI training input.

Day 1's technical core is crypto agility and the PQC migration project, with supply-chain security called out because of recent end-user hardware-wallet failures.

Documents considered

The session referred to the following documents, repositories, and standards. Bibliographic identifications and factual checks added during review are marked as editorial clarifications; they do not imply that the links were spoken or that the meeting adopted the findings. Names of the people who introduced the material are omitted.

Meeting website and a QR code to the event page were mentioned. No URL was spoken.

Discussion

The following is the substance of the session. It preserves claims, figures, alternatives, and objections. Discussion does not establish a decision. Any candidate agreement requires explicit working-group confirmation.

Day 1 is a hybrid meeting. The stated purpose of the record is an anonymized meeting report.

Recordings are for support of that report. The commitment stated in the room is that recordings and information from them are not fed to AI.

BGIN was described as a neutral forum whose job is to create neutral standards. Funding that neutrality was contrasted with commercial events: a commercial event can raise money more easily; a neutral forum cannot. Sponsorship was described as necessary to keep the community going. Hosts and sponsors were thanked. The published programme identifies CyberSMART, Georgetown University's Department of Computer Science, and the Psaros Center for Financial Markets and Policy as academic hosts; Digital Garage and VerifyVASP as sustaining sponsors; and World, NRI, and DCP as event sponsors. These are programme credits, not affiliations assigned to meeting remarks.

Substantive program, as announced:

Opening keynote on crypto agility, then two 90-minute sessions on the PQC migration project.

Afternoon: AI and blockchain, described as part of a FASE working group, then governance of the security supply chain. The supply-chain session was motivated by recent failures of hardware wallets used by individuals, and by the need to keep the security model of the blockchain ecosystem sound.

A business meeting on how BGIN will operate in the future.

A network reception from 18:00 outside the room.

Following day: parallel working-group sessions ; a keynote on accountability; industry design for an asset class and its sustainability; afternoon sessions on decentralized computing and market structure, stablecoin policy, AML policy, and a forensic taxonomy . An investor session during lunch, with input from event sponsors.

Day 2 parallel sessions: security AI agents; privacy-enhanced authentication, ZKP and proof of personhood; offline key management; and Security Target / Protection Profile (ST/PP). The published two-day programme resolves the caption's timing and topic labels.

The program and session detail were said to be on the meeting website, with a QR code to the event page. Additional session contributions were invited by email.

Matters not resolved

None on substance. The opening did not debate technical positions.

Disposition of the work

The PQC migration project is the subject of two 90-minute sessions immediately after the crypto-agility keynote. No design detail was given in this slice.

Actions

Each action is written so that it can be tracked without the rest of the record. Where the room named only a person, the action is kept and the name is omitted.

Sessions were asked to start on time.

Further contributions to a session: email.

Program: meeting website.

Coverage

This record covers the published Opening Plenary in Room A. The recording continues into the crypto-agility keynote, which is reported separately. The published Day 1 programme places both PQC migration sessions in Room A before lunch, and places AI and blockchain and the security supply chain after lunch. Room B has no published Day 1 session. The open-space Agent Hack session is not in this recording. Figures are reported session claims, not independently validated measurements. Technical names are corrected where supported by the recording, chat, or identified primary documentation. Where a name could not be checked against another part of the same recording, it is left unverified rather than guessed. Logistics, introductions, and names of speakers are omitted.

Housekeeping dominated the slice: thanks, sponsor acknowledgements beyond the neutrality point above, Zoom and Signal link requests, microphone advice, no food or drink in the classroom, no lunch provided and a restaurant list already posted, hybrid audio checks, and a request to state names when speaking (the report anonymizes those names). One coverage note: treat named introductions in later slices as identification noise, not as reportable attribution.
